Strategy Update: 30 June 2020

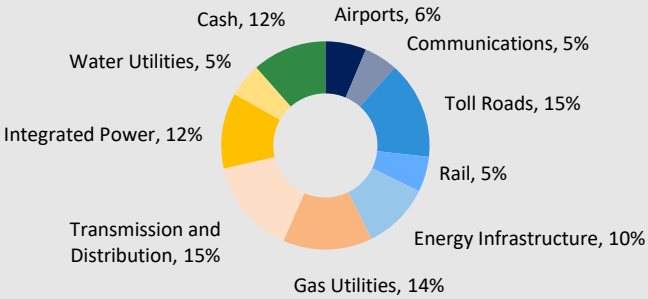

Magellan Select Infrastructure (AUD Hedged)

Portfolio Manager	Strategy Inception Date	Total Strategy Assets	Total Infrastructure Assets [1]
Gerald Stack	1 July 2007	AUD $7,724.3 million	AUD $15,912.3 million

Objective	Approach
Capital preservation in adverse markets	Concentrated 20-40 stock portfolio applying our proprietary infrastructure classification
Pre-fee return of CPI plus 5-6% p.a. through the economic cycle	Valuation driven benchmark-unaware strategy
	Highly defensive, inflation-linked exposure

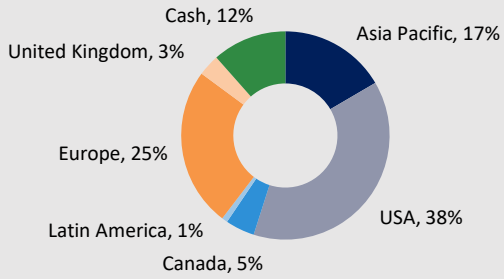

Top 10 Holdings[2]	Sector	%
Transurban Group	Toll Roads	6.1
Atmos Energy Corp	Gas Utilities	5.8
Crown Castle International	Communications	5.2
Red Electrica Corporacion	Transmission and Distribution	5.0
Eversource Energy	Integrated Power	4.6
Enbridge Inc	Energy Infrastructure	4.5
Sempra Energy	Gas Utilities	4.5
Xcel Energy Inc	Integrated Power	4.3
Vopak NV	Energy Infrastructure	4.2
Snam SpA	Gas Utilities	3.6
	TOTAL:	47.8

1 Comprised of all Infrastructure Strategies.
2 The data is based on a representative portfolio for the strategy. Refer to the end of the document for further information. Sectors are internally defined. Geographical exposure is by domicile of listing. Exposures may not sum to 100%/total due to rounding.
3 Returns are for the Global Select Infrastructure Hedged in AUD Composite and denoted in AUD. Performance would vary if returns were denominated in a currency other than AUD. Refer to the GIPS Disclosure section below for further information. Composite (Net) returns are net of fees charged to clients and have been reduced by the amount of the highest fee charged to any client employing that strategy during the period under consideration. Actual fees may vary depending on, among other things, the applicable fee schedule and portfolio size. Fees are available upon request.
4 Risk measures are for the Global Select Infrastructure Hedged in AUD Composite before fees. The Global Equity Index is the MSCI World NTR Index (hedged to AUD).
5 The Benchmark or Global Infrastructure benchmark is comprised of the following: from inception to 31 December 2014 the benchmark is UBS Developed Infrastructure & Utilities NTR Index (hedged to AUD) and from 1 January 2015 onwards, the benchmark is the S&P Global Infrastructure NTR Index (hedged to AUD). Note: the UBS Developed Infrastructure and Utilities NTR Index (hedged to AUD) ceased to be published from 31 March 2015, replaced on 1 January 2015 with the S&P Global Infrastructure Index NTR (hedged to AUD).
* Returns are only for part year.

IMPORTANT NOTICE

This material has been produced by Magellan Asset Management Limited ABN 31 120 593 946 AFS Licence No. 304 301 (**'Magellan'**). It is being furnished to you to provide summary information regarding Magellan and an investment fund or investment strategy managed by Magellan (**'Strategy'**). This material is not intended to constitute advertising or advice of any kind and you should not construe the contents of this material as legal, tax, investment or other advice. In making an investment decision, you must rely on your own examination of any offering documents relating to the Strategy.

The investment program of the Strategy presented herein is speculative and may involve a high degree of risk. The Strategy is not intended as a complete investment program and is suitable only for sophisticated investors who can bear the risk of loss. The Strategy may lack diversification, which can increase the risk of loss to investors. The Strategy's performance may be volatile. Past performance is not necessarily indicative of future results and no person guarantees the future performance of the Strategy, the amount or timing of any return from it, that asset allocations will be met, that it will be able to implement its investment strategy or that its investment objectives will be achieved. Statements contained in this material that are not historical facts are based on current expectations, estimates, projections, opinions and beliefs of Magellan. Such statements involve known and unknown risks, uncertainties and other factors, and undue reliance should not be placed thereon. This material may contain 'forward-looking statements'. Actual events or results or the actual performance of a Magellan financial product or service may differ materially from those reflected or contemplated in such forward-looking statements. The Strategy will have limited liquidity, no secondary market for interests in the Strategy is expected to develop and there are restrictions on an investor's ability to withdraw and transfer interests in the Strategy. The management fees, incentive fees and allocation and other expenses of the Strategy will reduce trading profits, if any, or increase losses.

The Global Infrastructure Benchmark is comprised of the following: from inception to 31 December 2014 the benchmark is UBS Developed Infrastructure & Utilities Index Net Total Return (AUD Hedged) and from 1 January 2015 the benchmark is S&P Global Infrastructure Net Total Return Index (AUD Hedged). The benchmark changed because UBS discontinued their index series.
The UBS Developed Infrastructure & Utilities Index Net Total Return ($A Hedged) is a market capitalisation weighted index that is designed to measure the equity performance of listed Infrastructure and Utility stocks. Index results assume the reinvestment of all distributions of capital gain and net investment income using a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties. The index is hedged to Australian dollars.
The S&P Global Infrastructure Net Total Return Index (AUD Hedged) is a market capitalisation weighted index that is designed to track 75 companies from around the world diversified across three infrastructure sectors energy, transportation and utilities. Index results assume the reinvestment of all distributions of capital gain and net investment income using a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties. The index is hedged to Australian dollars.

GLOBAL INVESTMENT PERFORMANCE STANDARDS (GIPS®) DISCLOSURE

Magellan Asset Management Limited, doing business as MFG Asset Management in jurisdictions outside Australia and New Zealand, (MFG Asset Management) claims compliance with the Global Investment Performance Standards (GIPS ®)

For the purpose of complying with GIPS, the Firm is defined as all discretionary portfolios managed by MFG Asset Management, excluding portfolios managed by brands operating as distinct business entities. MFG Asset Management is a wholly-owned subsidiary of the publicly listed company Magellan Financial Group Limited. MFG Asset Management is based in Sydney, Australia. Total Firm assets is defined as all assets managed by MFG Asset Management, excluding assets managed by subsidiaries operating as distinct business entities.

The Global Select Infrastructure Hedged in AUD composite is a concentrated global strategy investing in strictly defined or "pure" infrastructure companies, (typically 20-40). The filtered investment universe is comprised of stocks that 1. generate reliable income streams 2. benefit from inflation protection and 3. have an appropriate capital structure. The investment objective of the strategy is to minimise the risk of permanent capital loss; and achieve superior risk adjusted investment returns over the medium to long-term. The portfolios are hedged to Australian dollars with Forward contracts. The composite was created in December 2011.

To achieve investment objectives, the composite may also use derivative financial instruments including, but not limited to, options, swaps, futures and forwards. Derivatives are subject to the risk of changes in the market price of the underlying securities instruments, and the risk of the loss due to changes in interest rates. The use of certain derivatives may have a leveraging effect, which may increase the volatility of the composite and may reduce its returns.

A copy of the composite's GIPS compliant presentation and/or the firm's list of composite descriptions are available upon request by emailing client.reporting@magellangroup.com.au

The representative portfolio is an account in the composite that closely reflects the portfolio management style of the strategy. Performance is not a consideration in the selection of the representative portfolio. The characteristics of the representative portfolio may differ from those of the composite and of the other accounts in the composite. Information regarding the representative portfolio and the other accounts in the composite is available upon request.

AUD is the currency used to calculate performance.

Strategy Commentary

The strategy recorded a positive return in the quarter. Stocks that contributed the most included the investments in Transurban and Atlas Arteria of Australia and Crown Castle International of the US. Transurban and Atlas Arteria gained on a view that less-harsh recessions than previously expected would curb the hits to traffic on their toll roads in Australia, Europe and North America. Crown Castle rose as lockdowns boosted traffic on its communications towers.

The only stock that fell to any extent in local-currency terms was Sydney Airport, which declined after the Australian government said that the Australian border would likely stay closed until next year. Three other stocks, US electricity utility First Energy, railroader Canadian Pacific and United Utilities of the UK, showed slight declines in local-currency terms after investors favoured other opportunities as economies reopened.

Index movements and stock contributors/detractors are based in local currency terms unless stated otherwise.

Stock Story: Red Electrica

Europe wants to become greener in energy terms. Spain is ambitious in this area too. In April, Madrid submitted its plan to the EU that declared the country is aiming for renewables to produce 74% of total electricity by 2030 and 42% of total energy demand. To show how ambitious Spain is, the plan entails installing more than two gigawatts of wind energy capacity and three gigawatts of solar capacity each year through the decade. This is a huge investment in clean energy.

This is a big opportunity for Red Electrica, which operates Spain's electricity power transmission grid. The Madrid-based utility, which earned two billion euros in revenue in 2019, performs a critical role in the functioning of the electricity market. Its responsibilities include not only building and maintaining the high-voltage transmission grid but also the day-to-day operations of the market and the long-range planning for the system through its role as the transmission system operator.

To keep up with the rapid growth in maintenance, intra-European connectivity and renewable energy, the company plans to spend about 2.9 billion euros over 2018 to 2022, a 39% increase in the annual rate of spending compared with the prior business plan. While the company is still working through its latest long-term plan, it is likely Red Electrica's investment spending will remain at these elevated levels.

In many businesses, capital expenditure would be considered a cost to investors. However, in a well-functioning regulated utility market, the company is entitled to receive compensation for the fair costs of running the business. This cost is paid primarily by customers and businesses through a component of the electricity access tariffs. As such, the capital spending falls within the 'fair costs' on which the company earns a regulated return, the source of 91% of Red Electrica's gross profits in 2019. It is already decided that Red Electrica will be allowed to earn a base return of 5.58% on its regulated asset base from 2021 to 2025, with an opportunity for higher returns if the company can find efficiencies in its operations.

Another favourable dynamic is the recent improvement in the regulatory oversight for the company. In 2019, the Spanish government granted increased independence to the National Commission of Markets and Competition, the regulatory body tasked with, among other things, setting the fair level of revenues that Red Electrica can charge. This came about due to a mandate from the European Commission. From an investment perspective, independent economic regulation is critical to investors receiving predictable, transparent and fair outcomes. This is especially true in areas as politically sensitive as energy prices.

In addition to its Spanish grid, Red Electrica has been gradually developing and acquiring a collection of electricity transmission assets in South America, including assets in Chile, Peru and, more recently, Brazil. These assets typically generate capacity-payment (that is, predominantly fixed) income streams.

Overall, the better regulation and capital expenditure opportunity in Spain position Red Electrica to deliver what investors expect from a utility and infrastructure stock; namely, one that will deliver reliable income streams with some capital growth.

However, like any investment, Red Electrica comes with risks. The company, for instance, has in recent years acquired a stake in a satellite provider Hispasat that is too far outside of the core business to be judged an attractive acquisition. However, this investment is a minority in the business mix and doesn't undermine the overall investment case.

Further, like many utilities, Red Electrica employs significant debt to fund its significant capital needs. However, the rating agencies are sanguine about Red Electrica's financial profile. (Moody's has an investment-grade Baa1 rating on the company; Standard & Poor's and Fitch rate it A-).

Finally, as for every business now, covid-19 poses operational and financial challenges. In Spain, electricity demand has fallen significantly during the lockdown and is still gradually recovering to prior levels. However, from an investment perspective, Red Electrica's exposure to this is minimal and its revenues are largely fixed, with any shortfall legally required to be compensated in future years.
